**„Integreat Yellow"**: Too much color on screen. Especially with the yellow icons, color pops out negatively. Focus is not clear enough on icons / categories.

DarkGrey: Whole screen is just to heavy and looks „depessing". (Icons are still there, but have same color as toolbar...)

Bright (#fafafa): Screen looks „light" and friendly. Focus intuitively on icons / categories. Best in my oppinion ;)

Feedback

```
1   General:
2   - Why did you decide for white as primary
    color?
3   - At least for Android this breaks the
    material design color scheme
4   -
    https://material.google.com/style/color.html#
    color-color-schemes
5   1. Splash:
6   - maybe a transparent/hidden statusbar?
7   - maybe transparent/hidden buttons?
8   2. Location:
9   - In my opinion, the icon + text take too
    much space (almost 1/3 of the screen)
10  - Maybe make it one line and smaller?
11  - Do we need an action bar here? We only
    have the option to search, which could
12  be integrated into the icon/text
13  - Why do you mix rounded/normal corners in
    the cards?
14  - How about a 'transparent' location-name
    such as our current android app? ;)
15  3. Language:
16  Same as Location
17  4. Overview
18  - I like the category-cards and especially
    the icon-set!
19  - Do we need a 'Select a category' - text?
20  - How do we get to
    Location/Language/Impressum from here?
21  5. 'Everyday Life'
22  - I think the icon takes too much space
23  - Maybe actionbar with category-name +
    icon?
24  - The organization of the cards is perfect,
    but are the cities really
```
